

Customer Sentiment Analysis Project

Key Performance Indicators, Insights, and Business Recommendations

This document summarizes the Key Performance Indicators (KPIs), business insights, and recommendations derived from the SQL-based Customer Sentiment Analysis project. The analysis focuses on understanding customer feedback, purchase behavior, complaint resolution efficiency, and platform performance in online shopping environments.

Key Performance Indicators (KPIs)

KPI	Description
Customer Sentiment Ratio	Measures the percentage of positive vs negative customer sentiment across platforms.
Average Customer Rating per Platform	Tracks the average rating customers give to each e-commerce platform.
Complaint Resolution Rate	Percentage of complaints successfully resolved by the platform.
Average Complaint Response Time	Average number of hours taken to respond to customer complaints.
Orders per Platform	Total number of customer orders recorded for each platform.
Product Category Demand	Identifies product categories with the highest purchase frequency.
Customer Demographics Contribution	Analyzes which age groups contribute the most purchases.
Gender-based Product Preferences	Shows which product categories are predominantly purchased by each gender.

Key Business Findings

- Customer satisfaction varies across platforms, with some platforms receiving significantly more positive reviews.
- Platforms with faster complaint resolution tend to maintain higher customer satisfaction levels.
- Certain product categories show consistently high demand, indicating strong customer interest.
- Specific age groups contribute a larger portion of online purchases, making them important target segments.
- Gender-based purchasing trends highlight opportunities for personalized marketing strategies.
- Platforms with slower complaint response times risk increased negative customer sentiment.

Business Recommendations

- Improve customer support response times to reduce negative sentiment.
- Focus inventory and marketing efforts on high-demand product categories.

- Leverage demographic insights for targeted marketing campaigns.
- Improve service quality to increase customer ratings.
- Monitor customer sentiment continuously to detect dissatisfaction early.
